

Reinforced PVC hose with nylon braid and PVC inner core

Color Coded Reinforced PVC Hose

WaterSaver color coded hose assemblies are designed for use with our keyed quick connect fittings.

Features of WaterSaver color-coded hose assemblies include the following:

- Hose has an inner core of natural polyvinyl chloride (PVC), a nylon braided reinforcement layer and a PVC outer layer. Hose is rated to 1000 PSI burst pressure, 300 PSI maximum working pressure.
- End fittings are permanently attached to the hose with a barb fitting and crimped ferrule. The end connections swivel to prevent kinking or twisting of the hose. Hoses are available with a variety of end connections for maximum flexibility.
- Outer layer of hose is color coded to match the color coding of the keyed quick connect to which it is connected.

Color Coded Hose, 3/8" NPT Male End Connections - Specify overall length of hose in inches (XXX) when ordering	
Item Number	Color
HPV3-XXX-3M-1	BLACK
